

@ How to find your IP address

Options

- whatismyip.com
- whatsmyip.org
- whatsmyipaddress.org
- On Windows - open command prompt and try: `curl ipconfig.me`
- Terminal on Mac: `curl ifconfig.me`
 - or for a simple response containing only the ip address: `'curl icanhazip.com'`
- Try from a personal device on the same router
- Log into router and dig

Other things to know

- Home IP address may change (especially after a reboot or power outage)
- VPNs and Enterprise networks (Like ODI offices) tend to have static IP
- We need your **public** IP not your local IP.
- The following are typically local addresses and will not work
 - 192.168.*
 - 10.0.*
 - 172.16.*
